Applied Physiology in Intensive Care Medicine. The main goal of mechanical ventilation is to help restore gas exchange and reduce the work of breathing (WOB) by assisting respiratory muscle activity. Knowing the determinants of WOB is essential for the effective use of mechanical ventilation and also to assess patient readiness for weaning.

(PDF) Applied Physiology in Intensive Care Medicine

Monitoring and management of critically ill patients is an exercise in applied physiology and pharmacology made possible through applied bioengineering. The intensive care unit affords the possibility to monitor a wide variety of physiologic variables continuously, and to use that information to prevent and treat organ failure. Central to
