arxiv e-print archive** - two-dimensional conformal models of space-time and their compactification vladimir v. kisil abstract. we study geometry of two-dimensional models of conformal space-time based on the group of moebius transformation. the natural geometric invariants, called cycles, are used to linearise moebius action. conformal completion of **conformal field theory and hyperbolic geometry - arxiv** - in this letter, we establish several connections between the conformal field theory of boundary operators and two-dimensional hyperbolic geometry. first, by consideration of domain boundaries in two-dimensional critical systems, and the invariance of the hyperbolic length, we motivate a reformulation of the basic equation of conformal ... **computational conformal geometry and its applications** - conformal geometry has deep roots in pure mathematics. it is the intersection of complex analysis, riemann surface theory, algebraic geometry, differential geometry and algebraic topology. computational conformal geometry plays an important role in digital geometry processing. recently, theory of discrete conformal geometry and algorithms of **on vertex operator algebras, their representations, and corresponding two-dimensional conformal geometry a thesis submitted to the mathematics department - department of mathematics at columbia university - welcome** - two-dimensional conformal geometry in the formulation of vertex operator algebras was made rigorous. in simplest terms, huang showed that vertex operator algebras arise as algebraic structures governed by the interactions of closed vibrating strings in space time. more specific- **two-dimensional conformal field theory - math.ucsd** - these notes. that is not to say that two dimensional conformal manifolds cannot be fitted in to the framework which we describe. however, in order to have a canonical tractor calculus on two dimensional conformal manifolds the conformal manifold needs to be equipped with an extra structure, weaker than a riemannian structure **geometric algebra: an introduction with applications in euclidean and conformal geometry - sjsu scholarworks** - geometric algebra: an introduction with applications in euclidean and conformal geometry by richard a. miller this thesis presents an introduction to geometric algebra for the uninitiated. it contains examples of how some of the more traditional topics of mathematics can be reexpressed in terms of geometric algebra along with proofs of several ... **twistor manifolds and three-dimensional conformal geometry - ams** - [1978]). intermediating between these two theories is a relationship between 3-dimensional conformal geometry and cr (partially complex) manifolds of dimension 5. in this paper, we will explain this relationship, focusing on the imbedding problem: when can these partially complex manifolds be realized as real hyper- **4. a universal model for conformal geometries of euclidean, spherical and double-hyperbolic spaces -
